MAESTRO™ /

YOU ARE A SUPER-CONDUCTOR.

Maestro™ was designed specifically to open new worlds. And this intuitive, plug-and-play control console does just that. With a state-of-the-art display and thoughtful ergonomics, Maestro directs operation of any FLEX-6000™ Signature Series transceiver without the need of a traditional PC. This means a newfound sense of freedom and a sense of control like never before. Simply connect Maestro directly to your radio or wirelessly through your local area network (LAN) or wide area network (WAN) to any FLEX-6000 series transceiver, and you'll be ready to operate like the super-conductor you were meant to be.

FUN AND EASE OF USE IN PERFECT HARMONY.

No matter where you fall on the scale in the world of amateur radio, Maestro is the perfect addition to your fleet. Whether you are the most serious of serious contest operators, a DX chaser, rag chewer, or you're just in it to "play radio," Maestro is incredibly intuitive, fun and easy to operate.

It's a console that beautifully and harmoniously combines a high-definition 8-inch touch display in concert with ergonomically designed controls to enhance ease of use while maximizing workflow efficiency in virtually any SmartSDR™ application.

A SYMPHONY OF SIMPLICITY.

After we interviewed many of the world's top contest/DX operators to better understand their operating styles and goals, "keep it simple" was what we heard the most. Over and over, users communicated that frequently used controls should be intuitive, single function, require minimal hand motion and should be comfortable to use over long periods. Based on these observations, Maestro simply and elegantly orchestrates control function, placement and ergonomics for maximum tempo in the most important configurations, including DX, split, SO2R, Run, S&P and Multi operation.

The controls used most frequently are where they should be: at your fingertips. Controls are clearly labeled for intuitive operation and designed to minimize hand motion for the most common operations. Controls that are used less frequently are still easily accessible on the large touchscreen display, bypassing confusing, multi-level menus found on most transceivers. And like smartphones and tablets today, capacitive touch control is prevalent on the large LCD display for intuitive pan, zoom, tune and menu operation. Everything you can imagine is doable, but with graceful simplicity.

In addition, FlexRadio continues to set the bar for high-resolution, real-time spectral display in amateur radio transceivers. Maestro now extends that same "HD visual radio" capability from the PC-based SmartSDR for Windows to the 8-inch touchscreen format.

YOUR SHACK IS WHEREVER YOU ARE.

If you've ever longed for the moment when you could monitor the bands or work DX from a lounge chair by the pool or from the comfort of your very own leather recliner — the time is now. Maestro's small footprint and minimal wiring clean up your operating position and let you mount the radio virtually anywhere in the shack or around the house. Its sleek, lightweight design makes it not only the envy of your peers, but also easy to carry or pack. And if you're looking for complete, untethered freedom, the Maestro does support operation by battery.
